

CyberSecurity Camps

2019

Bay Area Community Colleges are hosting week-long summer CyberCamps for high school students. The ideal camp candidates are incoming (2019-20) 9th-12th graders with little to no cybersecurity experience. SRJC Petaluma is hosting two (2) camps, an Intro and an Advanced. The camps feature five days of FREE introductory and advanced cybersecurity training. Training modules cover a variety of topics including cyber hygiene, ethics, systems administration, security audits, and network forensics. Instruction is led by Computer Studies faculty assisted SRJC Networking Security and Systems Administration (NSSA) students. Each five-day program concludes with team competitions and awards.

For more information about the Bay Area Regional Cybersecurity efforts, including locations and dates of the other Colleges' camps, go to <https://www.baycyber.net>
